University of Texas Medical Branch/Shriners Burn Center, Galveston, Texas 77550, USA

Professor & Head, Department of Plastic Surgery,  
Rajarajeswari Medical College & Hospital, Bangalore, India

Director, "AGNI RAKSHA" NGO for Burn Survivors, Bangalore, India

## TO WHOM IT MAY CONCERN

With respect to the use of Helicoll for burns, trauma wounds, surgical wounds (donor sites, etc.), venous ulcers, diabetic ulcers, and pressure ulcers, I have used Helicoll both in India and USA during my clinical practice on many patients with exemplary *results over the* past decade. I have seen Helicoll reduce and in many cases eliminate pain in burn and graft patients (when applied to donor sites). Helicoll has increased patient satisfaction and comfort, reduced healing time, all while saving my facilities significant money. Throughout my career I have used many different products and have found Helicoll to be the most consistent cost effective treatment for my patients. I am quite pleased to recommend any clinician to try Helicoll in their facility and see the results for their own satisfaction of clinical outcome.
